

4. Enter the name of the desired Add-on in the **Search all add-ons box**, in this case enter

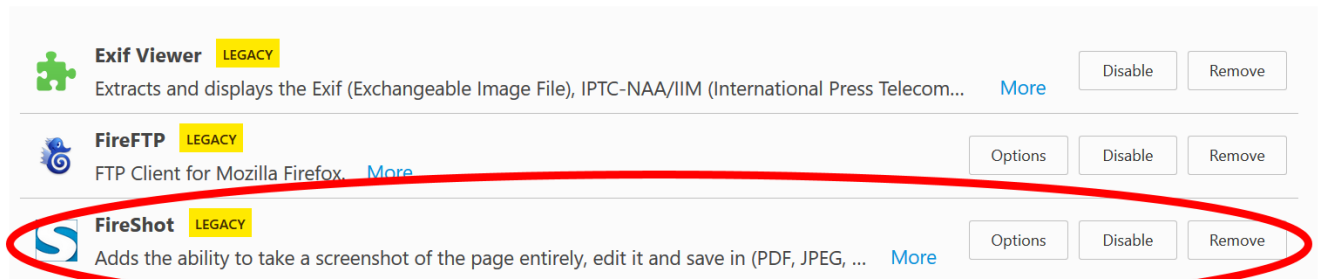

5. When the list of add-ons appears, click **INSTALL** next to the desired add-on

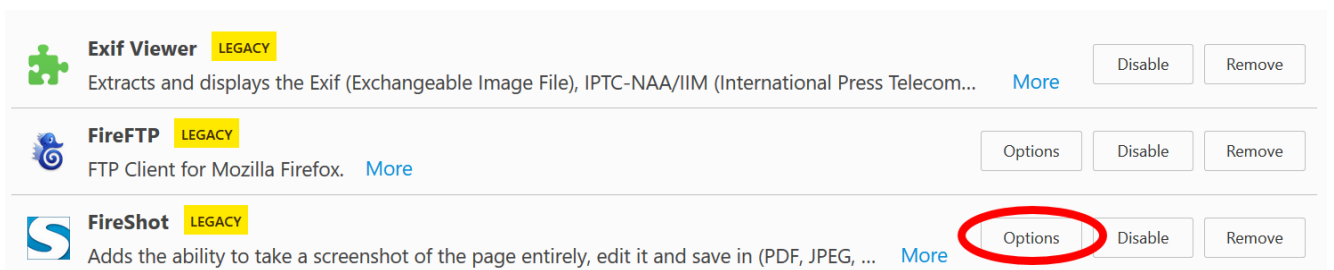

6. Once the add-on is installed, you will usually be prompted to **Restart now**. Click this link. It will restart the browser and may open a webpage relating to the add-on you just installed in a new tab. Read this for information on your add-on.

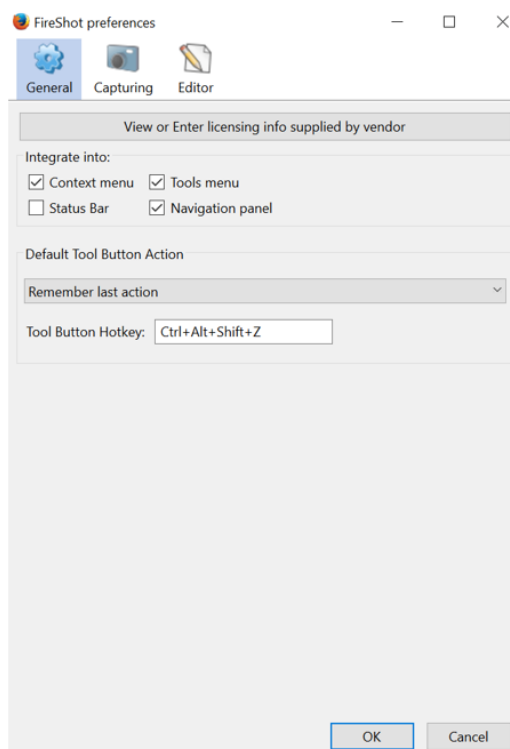

- Return to the Add-ons tab in your browser and click **EXTENSIONS** in the left pane. Here you will see a list of all add-ons you have installed, including in this case, FireShot.

- Some add-ons have an **Options** button to assist with customisation and all have a **Disable** and **Remove** option. Click **Options** in this case.

- To customise the location of the information provided by this add-on (FireShot), click the appropriate option in the preferences panel. Click OK when you have finished.

10. Close down the Add-ons tab. You will now be able to use the functions of the add-on. In this case, WorldIP provides a flag in the location bar on the browser. When you visit a webpage, hover you mouse pointer over the flag for information about the webpage, including IP address of the host server. Also displayed is your public IP address.
